

User Testing & Feedback

We conducted usability testing with **3 users** who matched our target audience (students and young professionals). Each participant was asked to explore the core features of **Skill Sync**: registration, login, home page interactions, category selection, and profile management.

Participant 1: (University Student, 20)

- **Feedback:** Found the post interaction (like, comment, save) very intuitive.
 - **Issue:** Search bar wasn't easy to find on the navigation bar.
 - **Suggestion:** "Make the search bar more visible with a bigger icon or placeholder text."
 - **Improvement Made:** Increased search bar size and added a "Search skills or users..." placeholder for clarity.
-

Participant 2: Bilal (University Student, Developer, 24)

- **Feedback:** Liked the clean dashboard and post history view.
 - **Issue:** Found the category selection confusing — not clear if he could select multiple categories.
 - **Suggestion:** "Add checkboxes or clearer selection feedback."
 - **Improvement Made:** Replaced dropdown with checkboxes and a "You've selected..." preview area.
-

Participant 3: (University Student, 23)

- **Feedback:** Loved the idea of saving posts for later.
 - **Issue:** Didn't notice the save icon easily.
 - **Suggestion:** "Use a more familiar icon like a bookmark, and add a hover tooltip."
 - **Improvement Made:** Updated the save icon to be user friendly.
-

Key Improvements After Testing

Issue Identified	Solution Implemented
Search bar not visible	Enlarged with placeholder text
Confusing category selection	Switched to checkboxes with visual feedback
Save icon unclear	Make it more user friendly
